

PERSONAL BRAND STRATEGY

Nadir Mostefaoui

Product Designer — Founder, Nawat Studio

Prepared August 2026

Reference document — review and approve before touching the website or planning content.

Who You Are, Now

Since July 2026 you paused the remote job search and consolidated on Nawat Studio as your one business. This document takes that pivot one step further: your personal brand now leads with the work you can point to — Product Designer — and carries “Founder of Nawat Studio” as the credential behind it, not the headline.

This changes what the site is for. It's no longer a resume aimed at a hiring manager's ATS filter. It's a credibility page that makes a Gulf client or partner confident enough to reach out to Nawat — with you as the name they're actually trusting.

“Product Designer. Founder of Nawat Studio. I turn complex, data-heavy products into clear interfaces — for teams across the UAE, Qatar, and Saudi Arabia.”

That line is the positioning statement to test everything else against. If a piece of copy contradicts it, the copy is wrong, not the statement.

Designer First, Founder Second

A 2026-07-10 decision locked “Product Designer” as your title everywhere and explicitly ruled out “Founder” or “Lead” — at the time, the site existed to pass recruiter title-matching filters, and a founder title would have mispriced you for a mid-level remote role. That constraint no longer applies: the job search is paused and the site's job is now to win Nawat clients, not job offers. So the title rule updates, but the underlying instinct behind it — don't let a title overstate you — stays.

Practical rule: “Product Designer” stays the first thing anyone reads — hero headline, LinkedIn headline, CV title. “Founder of Nawat Studio” shows up one line later, as the credential that explains why a client should trust the work: not a rebrand, an addition.

- Site hero: headline stays “Product Designer”; sub-line or bio adds “Founder of Nawat Studio.”
- LinkedIn headline: “Product Designer · Founder, Nawat Studio” — designer noun first, founder as the modifier.
- CV: title stays “Product Designer”; a founder line moves into the experience/summary section, not the header.
- Case studies: role line per project states what you actually did (designer, or designer + founder if it was Nawat-delivered) — never just “Founder.”

Who You're Speaking To

Target audience is the Gulf: UAE, Qatar, and Saudi Arabia specifically, not the Middle East in general. These are B2B, SaaS, and enterprise teams who need the same enterprise-UX and design-systems discipline your DataMaster work already proves — the same rare-differentiator argument from the earlier positioning work (Arabic/RTL, accessibility, documentation/handoff) just aimed at a narrower, more specific buyer.

Language priority

- Arabic — default. This is the primary audience's primary language.
- English — secondary. Covers international teams operating in the Gulf and anyone forwarding your site internally.
- French — kept, deprioritized. No longer serves a targeting purpose (the France/francophone angle is gone with the job search) but stays as a courtesy for existing francophone contacts.

This is a strategy decision only for now — changing the site's default locale and switcher order is website work, tracked for the next session.

04 — THE NAWAT / DATAMASTER RELATIONSHIP

Correcting the Timeline

The site currently shows DataMaster Analytics as one continuous role, “Sep 2024 – Present,” auto-computed as ongoing. That reads as if you're still their employee while also running your own studio — a contradiction next to “Founder of Nawat Studio.” The relationship is real and still ongoing, but its nature changed in January 2026: you stopped being their employee/freelancer and Nawat became their design partner. The fix is to split the single entry into two, not to shorten it.

ROLE	PERIOD	STATUS
DataMaster Analytics — Product Designer (Employee / Freelancer)	Sep 2024 – Dec 2025	Closed
Nawat Studio — Founder (DataMaster: ongoing client, branding + product design)	Jan 2026 – Present	Ongoing

Website task: split the Experience entry, stop auto-computing DataMaster as one ongoing duration, and fold the ongoing DataMaster relationship into the Nawat entry instead.

05 — CASE STUDY ATTRIBUTION

Who Gets Credit for What

Not every DataMaster case study is Nawat's work — only the design system was actually built under Nawat. Task Master and B2B Sales ERP predate January 2026 and were built while you were DataMaster's

employee/freelancer, before Nawat existed. Crediting Nawat with pre-2026 work would contradict the founding date shown elsewhere on the site — the guardrail below exists for exactly this.

CASE STUDY	BUILT	ATTRIBUTION
Iksir Design System	Under Nawat (2026)	Nawat client work — DataMaster is the client
Task Master App	Pre-2026	Personal history — built as DataMaster's employee, predates Nawat
B2B Sales ERP	Pre-2026	Personal history — built as DataMaster's employee, predates Nawat
eLearning Platform	Pre-2026	Personal history — Five Angles client (Dubai), unrelated to Nawat/DataMaster — unchanged

You mentioned a roadmap with DataMaster for future Task Master / B2B Sales redesigns under Nawat, details not shareable yet. Once those ship, they become new Nawat-attributed case studies — the current pre-2026 versions stay as personal history until then. Don't publish or hint at the roadmap itself.

06 — GUARDRAILS

Lines Not to Cross

- Scope honesty: stay within what's demonstrated — enterprise/data-heavy UX, design systems and tokens, B2B product and brand design. No “full-service agency” or business-consulting claims without your explicit confirmation the capability is real.
- Timeline honesty: nothing delivered before January 2026 gets credited to Nawat, on the site or in any pitch — including Task Master and B2B Sales ERP.
- The counter-cyclical workload mechanism between the job search and Nawat stays fully private — never appears in copy, pitches, or this document's public-facing descendants.
- “Founder” never leads. If a draft opens with the founder title before the designer title, that's a rule violation, not a style choice.

07 — WHAT'S NEXT

Sequencing

This document is the reference point for the next two sessions — nothing here changes the live site or starts any content work yet, per your instruction to separate strategy from execution.

Phase 2 — Website

- Split the Experience timeline (Section 04).
- Relabel the four case studies per the attribution table (Section 05).

- Add the founder credibility line without moving it ahead of “Product Designer” (Section 02).
- Switch default language to Arabic, reorder the language switcher (Section 03).

Phase 3 — Content

- Define content pillars and cadence for the Gulf Arabic-speaking audience, once the site reflects the new positioning.

Same designer. A studio behind him now.
